Re: 2006 Annual Residential Well Sampling Event  
American Chemical Service NPL Site, Griffith, Indiana

Dear Kevin:

MWH plans to collect groundwater samples from the following residential wells in accordance with the schedule set forth in the Long Term Groundwater Monitoring Plan during the week of September 18, 2006. Residential wells will be sampled for the full-scan Target Compound List and Target Analyte List parameters:

<u>Well Identifier</u>	<u>Street Address</u>
PW-A	1007 Reder Road
PW-B	1009 Reder Road
PW-C	1029 Reder Road
PW-D	1033 Reder Road
PW-Y	1002 Reder Road

The sampling plan provides the U.S. EPA the opportunity to request changes to the residential sampling locations. In accordance with the plan, the sampling will proceed as described above as long as U.S. EPA has not requested a change prior to the scheduled sampling (changes in sampling locations may result in some delay to accommodate residents' needs). We will notify each resident in advance to set up the sampling schedule.

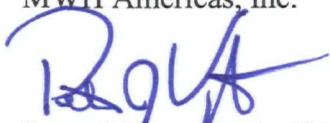

MWH normally provides you four weeks notice of our intent to sample residential homes in the ACS vicinity. We have discussed this activity during meetings with the U.S. EPA, so we have not provided you written notice four weeks before sampling. If you would like to postpone the residential sampling activities please let me know and we will comply.

As we have done in the past, we will request expedited reporting from the laboratory for the VOC analyses at the residential wells. The results will be evaluated and any MCL exceedances will be reported immediately to the Agencies.

If the schedule proposed in this letter is accepted, this sampling will be conducted concurrently with the regularly scheduled groundwater monitoring event. Please do not hesitate to call if you have any questions regarding the planned sampling or maintenance activities.

Sincerely,

MWH Americas, Inc.
